

Aprilia Dorsoduro 750 2016- (SH-V4 + SH-A01)

Remove the rear footrest on the right side as well as the brake fluid-reservoir.

Remove the screw that holds the speed sensor in place in order to turn it a little bit.

Carefully disconnect the vehicle speed sensor (vss) connector.

(It's quite hard to do that because the plug is right behind the frame and there is no room at all. It might be helpful to unplug the oxygen-sensor-connector and detach the oil filler cap.)

Aprilia Dorsoduro 750 2016- (SH-V4 + SH-A01)

Plug SpeedoHealer connectors in-line with the vehicle speed sensor (vss) connectors.

Typical position for the SpeedoHealer.

Secure the unit properly.
